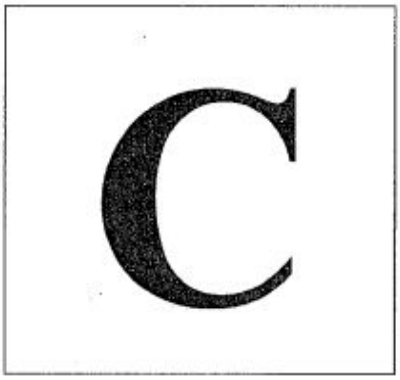
SPRING OPENING KIT

Up to 30,000 Gallons (Chlorine Based or Compatible Pools Only)

This Kit includes:

- 4 Bags of Rx Clear® Super Shock 68%
- 1 Quart of Rx Clear® Algaecide 50 plus
- 1-½ Pounds of Rx Clear® Conditioner/Stabilizer
- 1 Quart of Rx Clear® Multi Purpose Cleaner
- 1 Package of Test Strips



Opening Your Pool:

Pump off any water that has accumulated on your winter cover. Remove any leaves or debris. Remove the cover, clean it off and make sure it is dry before putting it away. Connect your plumbing and filtration system. Start filling your pool. While it is filling, you may want to clean the walls at the water line. After the pool is filled, test your water. If the pH is not between 7.2 and 7.6, adjust it accordingly. With proper pH levels, you may proceed.

1. Vacuum the pool if needed.
2. Add 4 bags of Rx Clear® Super Shock 68% through the skimmer.
3. Pour 18 fl. oz. of the Rx Clear® Swimming Pool Algaecide 50 plus into the pool, working it around the entire pool. Follow bottle directions for use for repeat and maintenance dosage.
4. When the pool has been vacuumed and the water is clear, backwash the filter.
5. You may now add the Rx Clear® Conditioner/Stabilizer according to the package directions. Pour into the skimmer. Do not backwash for at least 3 to 4 days to allow time for the stabilizer to dissolve.
6. Test the water regularly using the test strips provided.
